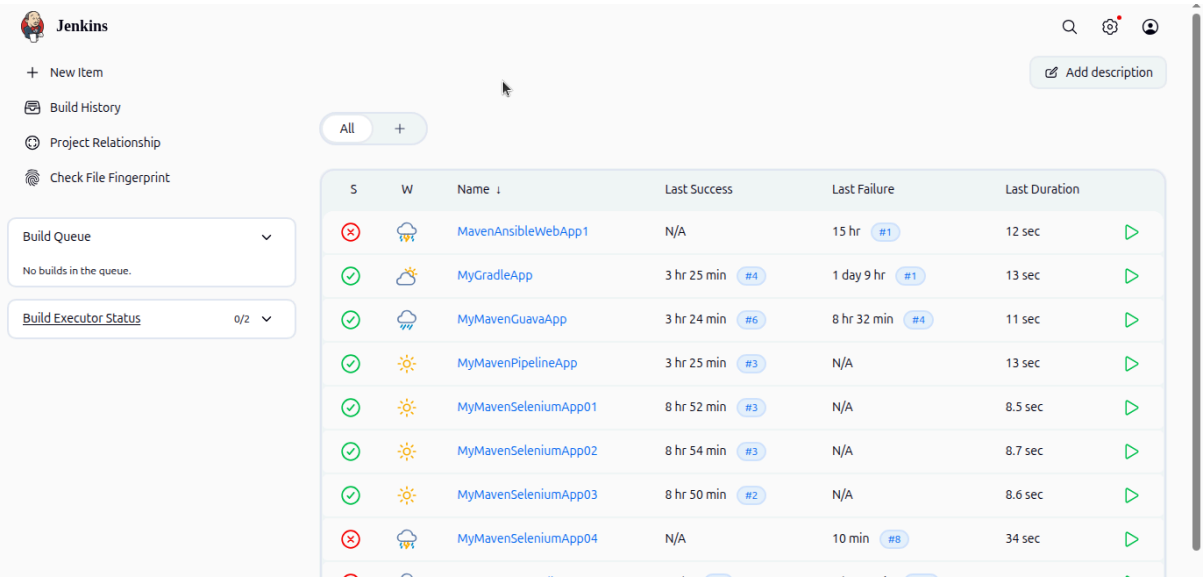
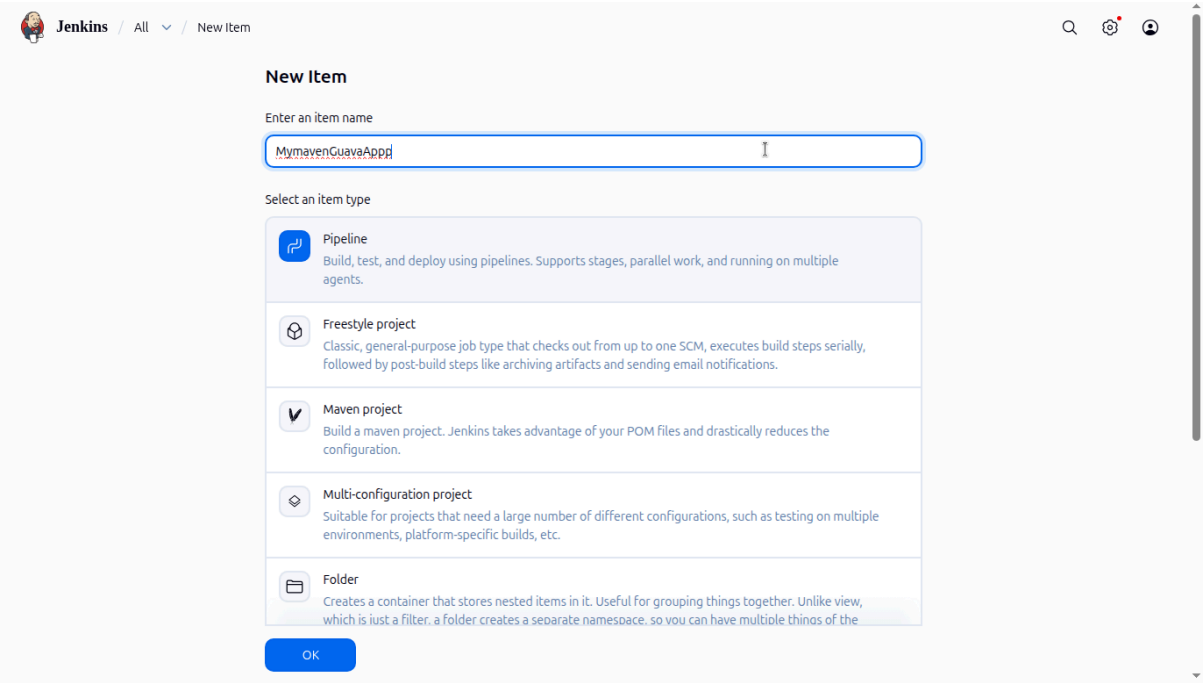
Jenkins Pipeline for MyMavenGuavaApp

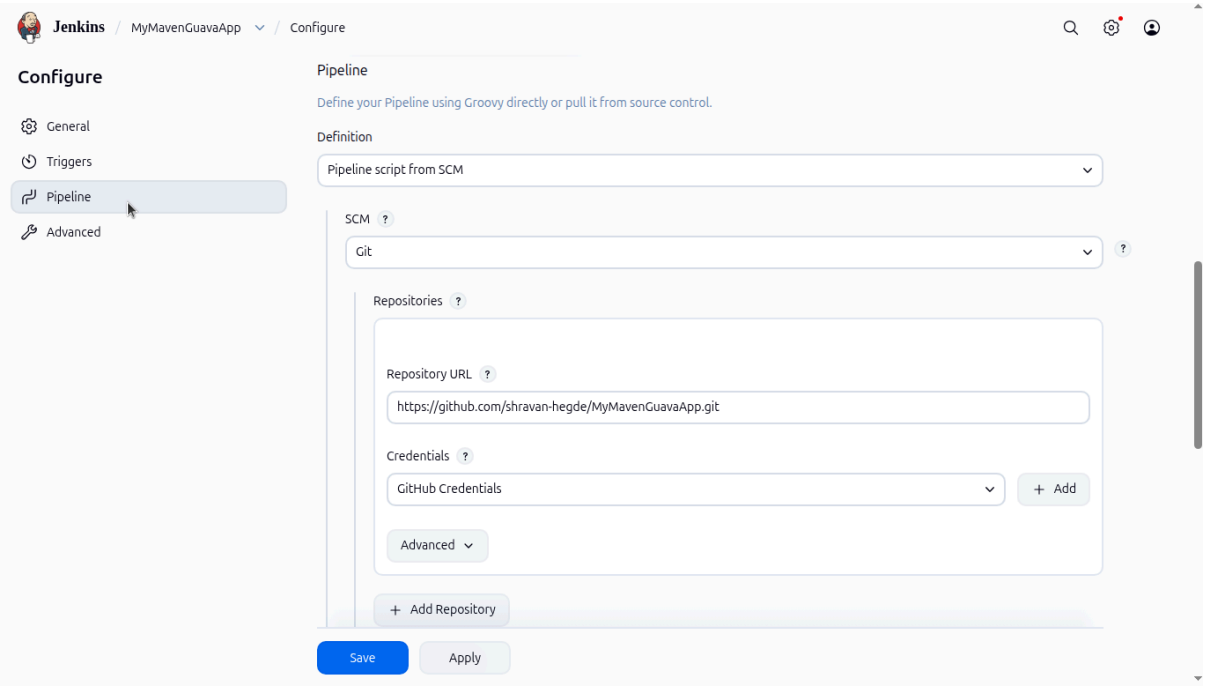
Step 1: Open the Jenkins Dashboard in order to create a new item



Step 2: To create the new project, select New Item from the Jenkins dashboard, enter "MyMavenAppSelenium03" as the name, select Pipeline as the project type, and click OK to initialize it.



Step 3: Configure the settings by Defining the script as “Pipeline Script from SCM” and SCM as “Git”. Thus, now as we have selected Git, we need to paste the Repository URL of the project given in GitHub and choose Credentials as “GitHub Credentials” which was created earlier.



Step 4: Now in Terminal, go to directory created for MyMavenAppSelenium03 and create an new file called “Jenkinsfile”

```
shravan-hegde@shravan-hegde-QEMU-Virtual-Machine:~/Devops/MyMavenGuavaApp$ ls
destination.txt  pom.xml  source.txt  src  target
shravan-hegde@shravan-hegde-QEMU-Virtual-Machine:~/Devops/MyMavenGuavaApp$ gedit Jenkinsfile
```

Step 5: Paste the code inside the Jenkinsfile

```
pipeline {
    agent any  // Use any available agent

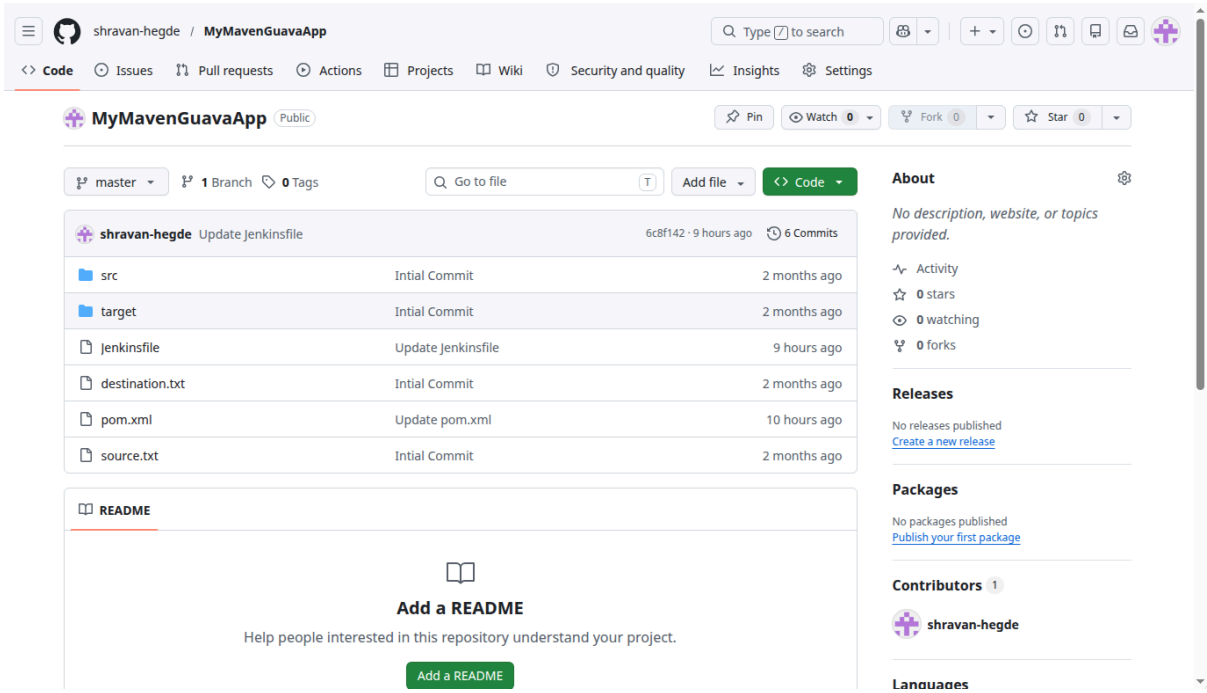
    tools {
        maven 'Maven'  // Ensure this matches the name configured in Jenkins
    }
    stages {
        stage('Checkout') {
            steps {
                git branch: 'master', url: 'https://github.com/shravan-hegde/MyMavenGuavaApp.git'
            }
        }

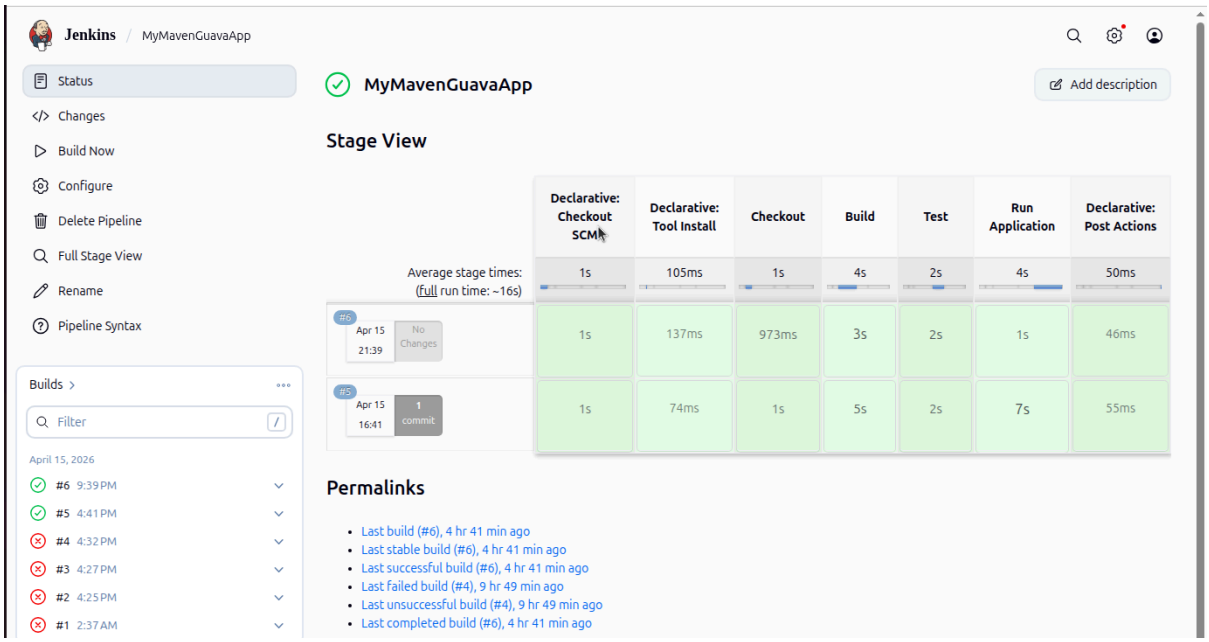
        stage('Build') {
            steps {
                sh 'mvn clean package'  // Run Maven build
            }
        }

        stage('Test') {
            steps {
                sh 'mvn test'  // Run unit tests
            }
        }

        stage('Run Application') {
            steps {
                // Start the JAR application
                sh '   mvn exec:java -Dexec.mainClass="com.example.App"   '
```

Step 6: Now we need to Push changes to the github.





Step 7: Now go to Jenkins and Build the Pipeline and thus check the Stage view for the successful execution.
